As a long-time amateur radio operator and technical experimenter, I urge that the existing and future amateur uses of 902-928 mHz be protected and unaltered by this proposed rule making. My current amateur radio interests include the pursuit of activities in the 902-928 mHz spectrum. Modifications or limitations to the existing regulations for amateur radio operations in this band would impact my ability to contribute to the advancement of the radio art as expressed in FCC Part 97.
